WORK EXPERIENCE

Data Analyst / Business Analyst | FegoBit Tech Solutions 2024–Present

Intern to full-time progression

- Built and maintained Power BI and Excel dashboards tracking 8–12 KPIs; produced weekly and monthly management reports using Excel, SQL, and Power BI.
- Reduced manual reporting effort by approximately 15–20% through data cleaning, standardisation, and Excel automation.
- Analysed 300+ operational records to identify trends and inefficiencies; shared findings across three teams to support planning and performance decisions.

Data Analysis Tutor | CeeyIT Solutions Jun–Oct 2026

- Managed a 98-student analytics cohort, supporting learners through data analytics training.

SELECTED PROJECTS

ClimateWins | Python, scikit-learn | GitHub

- Evaluated Basel weather classification with a chronological 2000–2007 / 2008–2009 split: Decision Tree achieved 98.2% test accuracy versus a 76.5% baseline, with 8 false positives versus 45 for KNN.
- Documented proxy-label, geographic, and temporal limitations, plus human-review requirements; delivered an interpretable model, stakeholder presentation, and ethical analysis.

Movies Data Analysis | Python, Streamlit | GitHub

- Explored budget, genre, and release patterns in TMDB 5000 data and built an interactive Streamlit dashboard for film-performance analysis.

World Layoffs SQL Analysis | MySQL | GitHub

- Cleaned and standardised global layoffs records; used CTEs, window functions, and rolling totals to investigate industry, country, and monthly trends.

G7 vs Africa Economic Analysis | Python, SQL, Tableau | GitHub

- Built a World Bank API pipeline and compared growth, debt, and economic shocks across 12 countries using SQL analysis and Tableau.

Telco Customer Churn Analysis | Python, Power BI | GitHub

- Analysed churn by contract, tenure, and service type; built a Power BI dashboard to identify customer segments for retention investigation.

TECHNICAL SKILLS

Analysis: KPI tracking, trend and variance analysis, EDA, data validation, feature engineering, model evaluation.

Python: pandas, NumPy, scikit-learn, matplotlib, seaborn. SQL: MySQL, PostgreSQL, joins, CTEs, window functions.

Reporting: Power BI, Tableau, Excel, Google Sheets, Pivot Tables, XLOOKUP/VLOOKUP, COUNTIFS, automation.

EDUCATION AND CERTIFICATIONS

B.Tech Industrial Chemistry | Federal University of Technology, Akure | 2021–2026

Machine Learning with Python | CareerFoundry | 2025

Data Analytics & Business Intelligence | Alex The Analyst | 2024–2025
